# **Product**

#### Product description/Product definition

The declared product is a wood-polymer cladding profile specially suitable for outdoor use. The plastics matrix can consist either of polyethylene (PE), polypropylene (PP) or polyvinylchloride (PVC).

This EPD does not refer to a specific product of one manufacturer, but declares the average environmental quality for all WPC cladding profiles produced by member companies of the VHI. The information represents 100 % of the German market. Detailed data can be obtained from the product description of the manufacturer in question.

For the use and application of the product the respective national provisions at the place of use apply, in Germany for example the building codes of the federal states and the corresponding national specifications.

General regulations on WPC products can be found in the product standard /DIN EN 15234 Parts: 1, 4, 5/ as well as the quality and testing guidelines of the

# WPC cladding profiles

#### Owner of the declaration

Verband der Deutschen Holzwerkstoffindustrie e.V. Schumannstraße 9 10117 Berlin

# Declared product / declared unit

1 m<sup>2</sup> cladding profile made of WPC

# Scope:

This declaration is an association EPD that represents an average product of the WPC manufacturing VHI member companies. The average is the weighted average of the manufacturer's data. The proportion of the production volume covered by the LCA is 84 % of the total production volume manufactured by all association members in the reference year 2021.

The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

The EPD was created according to the specifications of *EN 15804+A1*. In the following, the standard will be simplified as *EN 15804*.

#### Verification

The standard EN 15804 serves as the core PCR

Independent verification of the declaration and data according to ISO 14025:2010

internally x externally

Minke

Matthias Klingler (Independent verifier)

Qualitätsgemeinschaft Holzwerkstoffe e.V.. (www.qg-holzwerkstoffe.de/).

#### The legally binding version of these terms is the German EPD-document available on: www.ibu-epd.com | https://epd-online.com

#### Application

WPC cladding profiles are for cladding façades and can only be used as a non-load-bearing structural element (no construction engineering approval). The products pose no risk to health and are technically safe.

#### **Technical Data**

The technical construction data listed in the following apply to all WPC cladding profiles made by the manufacturers involved.

	S,	
Additives	pigments	8
	, filling	1
	materials	
	dispersir	
	g agent	
The everage W/DC eledding		

The average WPC cladding profile consists mainly of the following base materials:

Material	Description	Share in M-%
Wood fibres	Industrial waste wood of spruce and pine	63
Plastics matrix	Polyethylene (PE) Polypropylene (PP) Polyvinylchloride (PVC)	29
Additives	adhesives, internal lubricants, pigments, filling materials, dispersing agent	8

The plastic or plastic compound integrated in the product must consist of 100 % new material, or of pure plastic which has accumulated as waste material once in the course of industrial production. Recycled material that is pure and free of harmful substances may also be used.

In addition, various additives are used in production. These are organic pigments and UV stabilisers, lubricants, adhesion promoters and dispersants. The additives used belong to the functional groups carboxylic acid anhydride, alkene, calcium stearate, zinc stearate, carbon and carboxylic acid ester.

The share of wood in the product must be at least 50 per cent by weight (dry), and must come from verifiably sustainable forestry (FSC or PEFC certificate). Natural waste wood (waste wood category AI in accordance with the Waste Wood Ordinance) may be used, but waste wood of the categories AII to AIV may not be used. Other natural fibres may be components of the product.

In order to save raw materials and to prevent emissions, ground material which comes from elements of the company's own system and which was taken back from the market may be added again.

The product contains substances on the ECHA list of substances of very high concern (SVHCs) which may be Substances of Very High Concern (en: Substances of Very High Concern (SVHC) (date 21.02.22) above 0.1 mass%: no.

The product contains other CMR substances of category 1A or 1B that are not on the candidate list, above above 0.1% by mass in at least one of the a sub-product: no.

# LCA: Calculation rules

## **Declared Unit**

The declared unit is defined as follows: 1 m<sup>2</sup> of installed WPC cladding profiles, with the dimensions 1,000 - 4,000 mm/80 - 240 mm/18 - 25 mm and a surface weight of 7.79 kg/m<sup>2</sup>, over a service life of 40 years.

The composition of the WPC cladding profiles results from the weighted average, depending on the production volume of the manufacturers involved.

#### Details on declared unit

Name	Value	Unit
Conversion factor to 1 kg	-	-
Conversion factor to 1 kg	0.1284	-
Declared unit	-	m²
Declared unit	1	m²
Density	-	kg/m³
Density	1211	kg/m³
Profile type	-	-
Profile type	54 % solid profile and 46 % hollow- chamber profile	-

The WPC products of the individual manufacturers have different proportions of wood and plastic. In order to determine the influence of the wood content, it was reduced to 50 % on the one hand and increased to 80 % on the other hand. The proportion of wood has a strong influence on the individual environmental impact categories.

In general, a higher proportion of wood fibre in the WPC product can reduce the environmental impact of a WPC cladding.

In contrast, if the proportion of additives is changed by +/- 20 %, the results of the impact assessment for the individual environmental impact categories vary only very slightly.

The present construction product contains added biocidal products have been added or it has been treated with treated with biocidal products (it is therefore a treated product within the meaning of the Biocidal Products Regulation (EU) No 528/2012): no."

#### **Reference service life**

life.

No reference service life is declared; according to manufacturers' specifications, a service life (SL) of 40 years can be expected for average use. The technical service life of individual components is not exceeded here either, and so replacement does not need to be taken into account during the service

#### **System boundary** Type of EPD: cradle-to-gate, with options In accordance with EN 15804 the following modules

#### are used: Module A1-3

The aggregated representation in the form of A1-3 is used for production. This includes the supply of raw materials, the production of the WPC façade elements, all transportation to the manufacturer, the required energy consumption and resources, as well as all production waste that may accrue.

#### Module A4

Transportation of the product from the manufacturer to the construction site

#### Module B2

Maintenance of the WPC façade elements during the utilisation phase: cleaning of the WPC façade elements

#### Module C2

Transportation of the scrapped product to the recycling yard or to the manufacturer

#### Module C3

Waste treatment, such as thermal or material utilisation:

On account of the selected system boundaries (definition of the *end-of-waste* status), no disposal (Module C4) of the WPC façade elements takes place. This means that only the export of the properties inherent in the material is included in the balance. **Module D** 

Credits and debits outside the system under review, through thermal and material utilisation

#### Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to *EN 15804* and the building context, respectively the product-specific characteristics of performance, are taken into account.

# LCA: Scenarios and additional technical information

The following technical information forms the basis for the declared modules or can be used for developing specific scenarios within the context of a building appraisal if modules are not declared (MND).

Transport to construction site (A4)

Name	Value	Unit
Litres of fuel	142	l/100km

Litres of fuel	-	l/100km
Transport distance	500	km
Transport distance	-	km
Capacity utilisation (including empty runs)	85	%
Capacity utilisation (including empty runs)	-	%
Gross density of products transported	1211	kg/m <sup>3</sup>
Gross density of products transported	-	kg/m³
Capacity utilisation volume factor	-	-

# **Construction installation process (A5)**

Composition of the packaging waste to be disposed of:

Name	Value	Unit
Squared timber	15	%
Polyethylene foil	55	%
Polyester strapping	2	%
Grey board	20	%
Hardboard	8	%

## Maintenance (B2)

Name	Value	Unit
Information on maintenance Cleaning frequency in m²/a	0.0298	-
Water consumption	0.083	m <sup>3</sup>
Auxiliary material cleaning agent	0.01	kg
Maintenance cycle in m²/SL	1,192	Number/S L

## End of life (C1-C4)

According to information from manufacturers, it can be assumed that 70 % of WPC products are subject to material recycling and 30 % thermal recycling. Material and thermal recycling is declared in 100 % scenarios.

The average transportation distance between the consumer and the waste disposal facility is 250 km.

# Re-Use, recovery and recycling potential (D), relevant scenario information

The energy (electrical and thermal) or the created recycling material resulting from the thermal and material recycling of the waste is credited here. The efficiency of the waste recycling facilities is 66 % for German facilities and 69 % for European facilities. The data records used are based on German and European recycling facilities. The data records for electricity and heat are "DE:power mix" (production mix) and "DE: process steam" from natural gas 85 %, from GaBi 6.4.

Fire classification of construction products and building elements - Part 5: Classification using data from external fire exposure to roofs tests; German version EN 13501-5:2005+A1:2009

# DIN EN 15534-1

Composites made from cellulose-based materials and thermoplastics (usually called wood-polymer composites (WPC) or natural fibre composites (NFC)) -Part 1: Test methods for characterisation of compounds and products; German version EN 15534-1:2014

## **DIN EN 15534-5**

Composites made from cellulose-based materials and thermoplastics (usually called wood-polymer composites (WPC) or natural fibre composites (NFC)) – Part 5: Specifications for cladding profiles and tiles, German version EN 15534-5:2014

#### DIN EN ISO 9001

Quality management systems - Success through quality; German version EN 9001:2008

#### EN ISO 11925-2

Reaction to fire tests - Ignitability of products subjected to direct impingement of flame - Part 2: Single-flame source test (ISO 11925-2:2010); German version EN ISO 11925-2:2010

# EN ISO 1183-3

Plastics - Methods for determining the density of noncellular plastics - Part 3: Gas pyknometer method (ISO 1183-3:1999); German version EN ISO 1183-3:1999

ISO 16979

Wood-based panels - Determination of moisture content, ISO 16979:2003-05

#### EN 310:1993

Wood-based panels; determination of modulus of elasticity in bending and of bending strength; German version EN 310:1993

# EN 477

Unplasticised polyvinylchloride (PVC-U) profiles for the fabrication of windows and doors - Determination of the resistance to impact of main profiles by falling mass; German version EN 477:1995

## ISO 11359-2

Plastics - Thermomechanical analysis (TMA) - Part 2: Determination of coefficient of linear thermal expansion and glass transition temperature, ISO 11359-2:1999-10

## EN 317

Particleboards and fibreboards; determination of swelling in thickness after immersion in water; German version EN 317:1993

# EN ISO 4892-2:2013

Plastics - Methods of exposure to laboratory light sources - Part 2: Xenon-arc lamps

# European Waste Classification

Ordinance governing the European Waste Classification (Waste Classification Ordinance, AVV), 2001

#### GaBi 6.4

Software-System and Databases for Life Cycle Engineering, PE International AG, Leinfelden-Echterdingen, 1992-2015, with special acknowledgement to LBP, University of Stuttgart

# ÖKOBAU.DAT

Ökobau.dat 2014, Federal Ministry for the Environment, Nature Conservation, Building and Nuclear Safety

# FSC

Forest Stewardship Council, Germany

#### PEFC

Programme for the Endorsement of Forest Certification Schemes, Germany
